

# Future Goals for MORT

In order to expose FIRST and STEAM to townships and schools, we decided to team up with other teams such as 303 and plan an event that will promote STEAM related clubs, like robotics, into school districts. In order to complete this project, FIRST on Tour, MORT members will hold mini expos and free day camps where students from the community will be allowed to explore the opportunities of FIRST and the STEAM program. Administration and Board of Educations members will be invited to the event, but this invitation also provides an opportunity for MORT members to give a presentation or demonstration on why and how STEAM clubs should be implemented in educational systems. In order to make First on Tour happen, MORT members have been in the process of planning meetings with Board of Education members and Administration. Spreading STEAM in other communities with the help from other FIRST teams will not only promote the growth of Robotics clubs, but it will also unite existing FRC teams.

MORT wanted to provide STEAM camps for all members in our community, and in order to do that we initiated a project called STEAM Camp Scholarships. In our district, the mount olive middle school host a STEAM camp each year. Although he STEAM camps are an amazing way to get students involved into the FIRST program, the camp is very expensive. In order to make all students have the same experience, MORT is willing to fund every child that wishes to attend the STEAM camps in the mount olive middle school. In order to achieve this, MORT has hosted many fundraisers, at places like Panera and Chilli's. STEAM Camps are a great way for children in the community to expand their knowledge in STEAM and build interest in STEAM related clubs that are later presented at our high school.
