

MORT Support

At competitions we can be found at any number of pits, helping where needed. One stand out story occurred around the 2011 season, and involved a rookie team. The teams came to the competition with their “Kit of Parts”. They thought the robot had to be put together at the competition. MORT members worked feverishly to make sure the team was able to put their robot on the field. And they did!

Two years ago in 2014 we expanded MORT support to include having basic items available for traveling teams that due to traveling constraints, may not be able to bring certain items.

This led FRC team 6228 Mat robotics from Istanbul, Turkey to contact us for the South Florida Regional competition. We provided them with the items they requested, and despite some language barriers we made some great new friends, including the Turkish ambassador. Additionally, last year MORT reached out to the Briarley Robotics team through skype and this interaction lead to MORT teaching the team about programming, team structure, sponsor yielding and funds.
